

WHY WRAPS?

Dock poles are damaged by worms and other marine organisms that bore and eat the wood. Wraps cut off oxygen and sunlight to the boring worms that have already penetrated into the wood and prevent additional organisms from burrowing into the wood. Protection from wraps extends the life of your dock and adds aesthetic appeal.

NORTH FLORIDA DIVING

is here for all your underwater needs:

- DOCK PILING WRAPS & REPAIRS
- MARINE SALVAGE
- VESSEL HULL CLEANING

Professional, honest underwater services

**PROTECT YOUR DOCK WITH
DOCK PILING WRAPS**

**Extend the life of your pilings 30+
years!**

BEFORE

AFTER

OUR PROCESS

1. Inspect pilings
2. Scrape hard growth from the pilings
3. Install base layer to seal out oxygen and repel marine borers
4. Wrap the piling 12" above high tide to 8"-10" below sediment with a high density polyethylene and secure with stainless steel nails for longer life
